

Build e-Identification Solutions with Collis

Experts in e-ID

The Collis e-Identification Competence Centre sets the standards when it comes to electronic identification solutions. The e-Identification (e-ID) Competence Centre offers a range of e-ID solutions for e-Passports, National ID cards and employee cards to issuing authorities, personalisation bureaus and vendors globally. Collis offers testing tools, consulting services, and training. Let our expertise leverage your business.

Professional Services

As part of our delivery portfolio, the e-ID Competence Centre provides consulting and contracting services to its customers. Consultants from the e-ID Competence Centre bring with them years of experience in domestic and international e-Identification projects. This ensures that you, as a customer, benefit immediately from best practices, lessons learned and the do's and don'ts from other e-ID projects. Collis' e-ID consultants can assist in all kinds of e-ID activities such as defining a migration strategy for e-Passport, defining new issuing processes, testing and certification services, defining e-Passport content and

personalisation parameters, consulting on cryptography, setting up public key infrastructures (PKI), performance monitoring, project management and impact analysis.

Migration to Chip

Migration to chip technology leads to a new identification infrastructure and provides excellent business opportunities. Getting the most out of chip technology asks for a proven chip migration strategy: ABC of e-ID.

ABC of e-ID

With the ABC of e-ID, migration becomes easy. ABC of e-ID is a standardised, proven chip migration approach that can be applied to both e-Passport / e-ID card issuing and border control organisations. It ensures an efficient migration and a smooth go-live of technical infrastructure and operational processes.

Contact the e-ID Competence Centre and let us show you the power of ABC of e-ID.

e-ID Testing Tools

Professional e-ID testing tools are an absolute necessity in chip issuing and chip border control projects.

The e-ID Competence Centre provides a range of testing tools for e-Passports, National ID cards, (government) employee cards, acceptance devices and terminals and for middleware. These tools will help you towards a smooth, efficient, but above all trouble-free go-live of your chip infrastructure.

e-ID Academy

The e-ID Competence Centre provides professional training and education services. Branded as 'Collis e-ID Academy', a series of open training programmes and in-company sessions is available.

Following the success of the EMV Academy, Collis offers an 'e-ID Introductory Workshop' providing an easy to follow introduction into the world of e-ID. For those who want to gain more in-depth knowledge, the 'e-ID Expert Course' might just be what they are looking for, with a more technical focus and hands-on exercises.

About Collis

Collis is a leading competence centre in the design and testing of electronic transaction systems.

Collis has delivered significant contributions to the market, e.g. for EMV since 1998, since 2002 for the European Digital Tachograph, and since 2005 for e-Passport.

Expertise and equipment from Collis' e-Business and QA & Testing Business Units are at your service.
